

<div class="df_qntext">Are aluminum-air batteries a good energy storage system?

Among various types of metal-air batteries, aluminum-air batteries show a vast potential for the future energy storage system. Aluminum-air batteries possess a high energy density of 8.1 kWh.kg^{-1} and a high theoretical potential of 2.7 V . This is because aluminum is low cost, easily available, and good electrical properties.

<div class="df_qntext">Can aluminum-air battery be used as a green energy storage system?

In the long run, when the aluminum anode is fully consumed and converted to aluminum hydroxide, the aluminum hydroxide can be recycled back to aluminum which makes the aluminum-air battery a green energy storage system. Fig. 8.

<div class="df_qntext">What are the advantages of aluminum-air batteries?

Aluminum-air batteries possess a high energy density of 8.1 kWh.kg^{-1} and a high theoretical potential of 2.7 V . This is because aluminum is low cost, easily available, and good electrical properties. Moreover, the recycling process of used aluminum is mature, further encouraging the application of aluminum as a metal anode.

<div class="df_qntext">Can dual-electrolyte aluminum-air battery be improved?

We developed a high performance dual-electrolyte aluminum-air battery. We designed and analyzed the performance of the dual-electrolyte aluminum-air battery experimentally. The performance of the aluminum-air battery can be improved by using a dual-electrolyte system.

<div class="df_qntext">Can aluminum batteries be used as rechargeable energy storage?

Secondly, the potential of aluminum (Al) batteries as rechargeable energy storage is underscored by their notable volumetric capacity attributed to its high density (2.7 g cm^{-3} at $25 \text{ }^\circ\text{C}$) and its capacity to exchange three electrons, surpasses that of Li, Na, K, Mg, Ca, and Zn.

<div class="df_qntext">Could an aluminum-ion battery store energy?

The new aluminum-ion battery, developed by researchers, could be a long-lasting, affordable, and safe way to store energy. To create the solid electrolyte, the researchers introduced an inert aluminum fluoride salt to the liquid electrolyte already containing aluminum ions.
