

Analysis of the prospects of new energy charging and solar container

<div class="df_qntext">Can energy storage technology be used in charging and swapping stations?

The application of energy storage technology in charging and swapping stations has broad prospects, which can improve energy utilization efficiency, reduce operating costs, and promote the sustainable development of the electric vehicle industry.

<div class="df_qntext">How do new energy vehicles affect charging infrastructure?

The popularity of new energy vehicles puts forward higher requirements for charging infrastructure. As an important supply station for new energy vehicles, public charging, and swapping stations have new energy access, energy storage configuration, and topology that directly affect charging efficiency, grid stability, and economy.

<div class="df_qntext">How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9 GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

<div class="df_qntext">What is the design and optimization of public charging and swapping stations?

The design and optimization of new energy access, energy storage configuration, and topology structure of public charging and swapping stations is a complex system project that requires careful consideration of technical, economic, environmental, and other factors.

<div class="df_qntext">How big will electrochemical energy storage be by 2027?

Based on CNESA's projections, the global installed capacity of electrochemical energy storage will reach 1138.9 GWh by 2027, with a CAGR of 61% between 2021 and 2027, which is twice as high as that of the energy storage industry as a whole (Figure 3).

<div class="df_qntext">Why is energy storage configuration important?

Energy storage configuration is an important part of new energy access system of public charging and swapping stations. 6, 7 Due to the intermittency and instability of new energy power generation, direct access to power grid may affect its stable operation. Therefore, it is imperative to configure an appropriate energy storage system.
