<div class="df_qntext">Do coal mines need energy storage technologies?

Various energy storage technologies and risks in coal mine are analyzed. A significant percentage of renewable energy is connected to the grid but of the time-space imbalance of renewable energy,that raises the need for energy storage technologies.

<div class="df_qntext">Can underground space energy storage technology be used in abandoned coal mines?

The underground space resources of abandoned coal mines in China are quite abundant, and the research and development of underground space energy storage technology in coal mines have many benefits.

<div class="df_qntext">What is coal underground thermal energy storage?

Coal underground thermal energy storage (CUTES) is a form of energy storage that makes extensive use of the underground highways in closed mines as a place to store energy and to offer heating and cooling in the winter and summer months, respectively.

6.1. CUEES concept and technical requirements Coal Underground space Electrochemical Energy Storage (CUEES) makes full use of the underground space of coal mining to store or release electrical energy(various types of batteries) through reversible chemical reactions,so as to achieve efficient use of electrical energy,as shown in Fig. 20 .

<div class="df_qntext">How to promote coal mine energy storage?

(3) Provide financial incentives,such as subsidies,tax breaks and investment incentives,to attract investors to participate in coal mine energy storage projects. (4) Support technological innovation and R &D to promote the application and commercialization of new technologies in the field of coal mine energy storage.

<div class="df_qntext">How safe is underground electrochemical energy storage in coal mines?

Because underground electrochemical energy storage in coal mines needs to be equipped with a large number of batteries,it requires laying a large number of wires,which may lead to fires,so CUEES needs to be equipped with a complete and effective safety monitoring and protection system during operation to ensure safe operation. 6.2.
