

# Construction and installation of cables from solar container to transformer

<div class="df\_qntext">How do you connect a transformer?

The connections shall be made, between the transformer's terminals and the incoming and outgoing conductors, carefully following the instructions given on the nameplate or on the connection diagram. Check all of the tap jumpers for proper location and for tightness. Re-tighten all cable retaining bolts after the first 30 days of service.

<div class="df\_qntext">How to prepare cables for a STS installation?

The cables preparation should be embedded in buried corridors under the LV room and MV room in advance. The STS can be installed in coastal and offshore areas with high salinity. All electrical components are perfectly protected against overcurrent with Surge protection devices and Anti-explosion circuit breakers.

<div class="df\_qntext">How many MV/LV transformers are needed for a substation?

substations with installed power limited to 2000 kVA or two 1000 kVA MV/LV transformers. The purpose of this guide is to give an overview of the guidelines and requirements specified by current regulations for the design and construction

<div class="df\_qntext">How to connect a PCs to an inverter?

Step 1 Connect the AC input power cables. It is recommended that the socket length be greater than 45 mm. (Mandatory) MCCB cabling principle: The inverter and PCS are connected to the same MCCB and to the copper bar in back-to-back mode. The inverter is connected to the outer side of the copper bar, while the PCS to the inner side.

<div class="df\_qntext">What should be done when a transformer arrives on site?

When your transformer arrives on site, various procedures should be carried out to assure successful operation (installation, testing and various checkings). The successful operation of a transformer is dependent on proper installation as well as on good design and manufacture.

<div class="df\_qntext">How to install a container on a foundation?

Step 1 Determine the installation position of the container based on the foundation design drawing. Step 2 Measure the support points for the container on the foundation. Ensure that the support points. If the deviation exceeds 5 mm, prepare 2 mm or 5 mm steel spacers. Step 3 Hoist the container using a crane.

The general picture providing an overview of the key reference regulations relating to the design and construction of a MV/LV substation is shown in the following figure.

This document describes the STS-6000K-H1 smart transformer station (transformer station for short) in terms of its installation, electrical connections, commissioning, maintenance, and
