

# Disassembly of a small solar container power supply

<div class="df\_qntext">Can you put solar power in a shipping container?

There are many ways to skin a cat, and even more ways to add solar power to a shipping container. To be fair, I cheated a bit. Well, not really cheated, but I just went with a retail solar generator system instead of DIYing that part myself from &#224; la carte components.

<div class="df\_qntext">How many solar panels can a 2x4 hold?

I used pressure-treated 2x4s to build a pair of mounts for the solar panels, each of which would hold three 200W panels. With 1,200W of theoretical power (and probably more like 900W of solid real-world Florida solar energy), that would be a decent flow rate.

<div class="df\_qntext">How can I save money on solar panels?

To save a bit of money instead, you can source your own solar panels, solar charge converter, batteries, inverter, and wiring, then make it all play together. For me and my limited time, an offer from Pecron for a solution that would do all of that for me sounded perfect, so I went with Pecron's system.

<div class="df\_qntext">Do you need a solar-powered off-grid charging shed?

Between my electric bikes, e-motorcycles, e-ATVs, electric tractors, and a few other things I'm probably forgetting, having a weather-sealed, solar-powered off-grid charging shed would be a big benefit.

<div class="df\_qntext">How does a 3 volt power supply work?

The three units are all designed to plug into each other and cascade power between them, making this a simple operation. I literally just plugged in the wires and it worked like magic.
