

As a promising technology, interfacial solar steam technology has been widely recognized as an effective way to solve the shortage of energy and water, especially in remote areas. ...

Based on the new high-modulus carbon fiber CCM40J-6k, which is the critical raw material of a solar panel, the molding process of a mesh face sheet combined with epoxy resin, the ...

The tensile strength of the grid node of the domestic carbon fiber is 18.9% higher than that of the imported carbon fiber. It shows that the domestic carbon fiber CCM40J-6K can be applied to the ...

The utilization of a carbon material, in conjunction with the excellent light absorption properties of the carbon nanosheets and the ultrafine size and dispersion of the tungsten carbide ...

Their surface elements mainly contains four elements of C, O, N, Si, and both O/C ratio and the content of active carbon atoms of M40JB are higher than that of domestic high-modulus ...

Based on the new high-modulus carbon fiber CCM40J-6k, which is the critical raw material of a solar panel, the molding process of a mesh face sheet combined with epoxy resin, the overall mechanical ...

In this study, the Janus evaporation system of Porous-CNTs-Co/C fibers was successfully constructed based on multi-fluid electrospinning technology combined with a heat ...

The ratio of strength transformation of domestic T800 carbon fiber is more than 90%. Therefore, the domestic T800 carbon fiber/GWE-1 composites demonstrates excellent internal pressure bearing ...

The solar cell panel based on domestic high-modulus carbon fiber/epoxy composite of CCM40J-6K was taken as the research object, and the test research of thermal-cycle environmental adaptability was ...

Therefore, based on the traditional carbon fiber M40JB-6k as a reference, a systematic verification project was conducted to apply the CCM40J-6k carbon fiber composite at the process, ...

Hydrogen energy, which is seen as critical to solving energy and environmental crises, is part of global energy strategies. Safe, high-density hydrogen storage remains a challenge, with carbon fiber-wound ...

Could a carbon-based solar cell replace conventional photovoltaics? erials used in conventional photovoltaic technologies. Now a team at Stanford University has developed a s Can photovoltaic ...

In this study, a Janus-structured Porous Cobalt Carbon Nanotubes/Carbon (Porous-Co-CNTs/C) fiber evaporator was successfully fabricated via multi-fluid electrospinning combined with thermal ...

Article "Research on Thermal Cycling Adaptability of Solar Cell Panels Based on Domestic High-modulus Carbon Fiber/Epoxy Composites" Detailed information of the J-GLOBAL is an information ...

Two types of domestic T700S carbon fibers (CF1 and CF2) were investigated in three batches to find out their mechanical properties, including tensile properties of multifilament, tensile ...
