<div class="df_qntext">What is a solar boiler?

A solar boiler is a device manufactured from readily-available components, ensuring lower costs and reliability. The solar collectors are constructed of aluminum, copper, and tempered glass. The assembly incorporates the MICRO-FLO™; absorber, a continuous tube with only two connections for easy installation. Your investment in a solar boiler is in clean and natural energy.

<div class="df_qntext">Are solar panels a good option for a new boiler?

Two of the biggest growing trends right now are combi boilers and solar panels thanks to their great number of benefits. Solar panels have become increasingly popular as they are great at helping to cut energy bills. Get a free fixed price quote for a new boiler installed fast! - Find the perfect boiler! <div class="df_qntext">Can electric combi boilers be powered by solar energy?

This has prompted the heating industry to start developing solutions which allow electric combi boilers to be powered by solar energy, however, there are currently only a few combi boiler models available on the market that are actually compatible with solar thermal systems due to the complexities and challenges involved with combining the two.

<div class="df_qntext">Can a solar thermal system match a combi boiler?

Technically, yes, it can be done, however, there are a great number of factors that determine whether or not your solar thermal system can actually be matched with the combi boiler you have installed.

<div class="df_qntext">How does E-boiler work?

Not only will you be reducing your CO₂ and NO_x emissions, you will also be saving on energy costs because the e-boiler replaces fossil fuel by wind- or solar-generated electricity at times when this is the more interesting option. The system works together with your current fossil fuel-driven installations to produce steam.

<div class="df_qntext">Are electrode boilers a sustainable alternative to a gas boiler?

The electrode boiler, for instance, is the worry-free, sustainable alternative to a gas boiler that doesn't require large investments. Lower gas consumption results in a CO₂ reduction of 1,260 tonnes/year. By converting electricity into heat, the electrode boiler, supplied by Parat, uses one of the so-called 'power-to-heat' technologies.

SolaraBox Mobile Solar Containers: deliver 400-670 kWh/day with foldable solar arrays. Rapid-deploy, modular, rugged, and certified for off-grid, on-grid, or hybrid solutions.
