<div class="df\_qntext">How to prepare a solar thermal container?

To prepare the container, identify an outward corrugation for the vent holes (it comes out of the container toward you as you view it from the outside). Be sure to select a corrugation that will leave enough space (about 24") on either side to ensure that the entire back of the solar thermal unit is supported by the container.

<div class="df\_qntext">Can you put electricity in a shipping container?

For occasional use, go with a generator. For quiet and portable power, consider a battery bank. For long-term, reliable energy, solar is hard to beat. Adding electricity to a shipping container can transform it into a versatile and livable space, but safety and proper planning are key.

<div class="df\_qntext">Do you need a wiring plan for a shipping container?

Consider your floor plan, the function of each area, and the necessary outlets and lighting fixtures. A container office or residence, for example, will require different wiring setups than a storage or workspace. Luckily, single shipping containers are a small space. So electrical plans for shipping containers should not be complicated.

<div class="df\_qntext">Can dry box add electrical to my shipping container?

Dry Box can make custom modifications to your container including adding electrical to shipping containers. Dry Box offers 3 shipping container electricity solutions; a basic "Pigtail Package," a 20ft Subpanel Package and a 40ft Standard Subpanel Package.

<div class="df\_qntext">How does a solar thermal system work?

Solar thermal is not a new technology. It is often employed to heat water (solar water heaters) and, less commonly/commercially, air. In either case, the units function as follows (example is with air). A heat absorber is placed in a box with a transparent top/face. The box has an inlet at its lower end and an outlet at its upper end.

<div class="df\_qntext">How do you mount a water heater to a container?

With the unit held in place, drill mounting holes in the unit by going inside the container and drilling through the mounting holes that were made in the last step. Secure a bolt with a 1 1/2" washer through each hole and put another washer on the container side followed by a 1/2" nut. Secure all mounting bolts tightly.
