

<div class="df_qntext">Is solar-powered technology a viable alternative to methanol?

In contrast, solar-powered technology is a cost-effective and sustainable approach that can convert inexpensive and readily available liquid hydrogen carriers such as methanol to produce hydrogen 7, 8, which may be further used for biomass hydrogenation to manage the circular hydrogen economy.

<div class="df_qntext">Can Green methanol be used as a lignocellulosic hydrogen donor?

Here, we report a TiO₂ supported Cu single-atom catalyst with a four-coordinated Cu 1 -O₄ structure, which can be universally applied for solar-driven production of various renewable chemicals from lignocellulosic biomass-derived platform molecules with good yields using green methanol as a hydrogen donor, to address this challenge.

<div class="df_qntext">Can Green methanol be used as an in situ hydrogen source?

With the rapid development of green electricity, green methanol-related industries have entered the fast lane 10,11, and thus selective hydrogenation using green methanol as an in situ hydrogen source will be an ideal approach to the production of renewable chemicals¹².

<div class="df_qntext">Which companies use green methanol?

Maersk will use the green methanol to fuel its Laura Mærsk ship, the world's first container vessel able to operate on methanol; Lego will use it in the production of plastics; while Novo Nordisk will utilise it to replace existing fossil-fuel-based methanol in its chemicals production.

<div class="df_qntext">When will methanol volumes be released?

The first volumes are expected in 2026. Copenhagen, Denmark - A.P. Moller - Maersk (Maersk) has entered into a long-term bio-methanol offtake agreement with LONGi Green Energy Technology Co., Ltd. The agreement will contribute to lowering GHG emissions from Maersk's growing fleet of dual-fuel methanol container vessels.

<div class="df_qntext">Is green methanol a petrochemical?

Methanol is a primary petrochemical globally. Green methanol, produced by Power-to-X technologies, is a potential solution to the defossilisation of the existing methanol supply and fossil fuel substitution.

A German-Spanish solar and renewable hydrogen developer has unveiled plans to build a massive 800MW green hydrogen-to-methanol plant in southern Spain producing one million tons per year of ...

March 30, Shanghai Port made history by completing the first-ever bulk bunkering of domestically-produced green methanol, supplying 2,900 tons to the newly delivered 9000 TEU ...

Green methanol solar container technology

OCI will provide ISCC certified green biomethanol to power the maiden voyage of Maersk's first dual-fueled container ship, in a pioneering step towards the decarbonization of global shipping.

On October 30, the construction of China's first comprehensive green methanol demonstration project which integrates "green methanol production, fuel bunkering, and ocean ...

With continued innovation, strategic investments, and supportive policies, solar-based methanol could achieve cost parity with fossil-derived alternatives by 2050, positioning it as a cornerstone of global ...

Here, the authors report a Cu single-atom catalyst that facilitates the solar-driven synthesis of renewable chemicals from lignocellulosic biomass and green methanol as a hydrogen ...

On July 1, the "COSCO Shipping Yangpu" completed its first bunkering of domestically produced green methanol at Yangpu Port in Hainan. This marked the delivery of China's first large ...

For a long time, the development of green shipping has been highly valued by countries and organizations. Biomass gasification-based green methanol is seen as a long-term alternative to ...

Our reactor is effectively a solar panel that produces methanol instead of electricity. Some of the largest operators in the shipping sector such as Maersk and CMA CGM have already chosen methanol as ...

Biogas-based methanol production (biogas-to-methanol; BGtM) takes place through syngas production and subsequent conversion into methanol. Depending on the biogas composition ...

Sulzer is using its advanced separation technologies to enable the world's first commercial scale e-methanol plant, constructed by European Energy. The innovative facility in Kass#248;, Aabenraa, ...

Integrating solar energy into biomass gasification to produce green methanol is a promising approach to utilize 100 % renewable energy to realize stable supply. However, the ...
