<div class="df_qntext">Are fire incidents in battery energy storage systems a problem?

Fire incidents in battery energy storage systems (BESS) are rare but receive significant public and regulatory attention due to their dramatic impact on communities, first responders, and the environment. Although these incidents are decreasing, each case provides insights to improve energy storage safety.

<div class="df_qntext">Why do solar batteries catch fire?

The primary reason solar batteries catch fire is typically related to issues with the battery cells themselves. Lithium-ion batteries, which are commonly used in solar energy storage systems, have been known to catch fire under certain conditions.
