

How is the salary of new graduates in the solar container field

How much do solar jobs pay a year?

Through our analysis, we found that solar jobs in the system design sector have the highest average median pay, at \$76,378 a year. Jobs that fall under installation and operations have the lowest average median pay, at \$52,101, although that's still 31% higher than the median personal income in the U.S.

How much do college graduates make in 2025?

The average salary in 2025 for college graduates is \$68,500, according to a National Association of Colleges and Employers (NACE) survey. This figure is 2.5% higher than the starting salaries of the past year. On average technical majors have the highest starting salaries.

What are the highest paying solar jobs?

The highest-paying solar job is a lawyer with solar expertise, which can also be called an energy or environmental attorney. They earn a median annual salary of \$114,870, although out of all of the solar jobs, this one does require the highest level of education and training, including a postgraduate degree.

How many solar jobs are there in 2035?

A study by the U.S. Department of Energy found that by 2035, 40% of the nation's electricity could be provided by solar energy, and it will employ 1.5 million people in the process. What we wanted to know was which solar jobs pay the best and what level of education and training would one need to obtain them.

Will Gen Z graduates get a salary reset in 2025?

Graduation is a time for optimism and expectation - and for Gen Z graduates in 2025, the celebration is tempered with a harsh salary reset. According to a recent survey of approximately 3,000 rising and recent graduates, the salary shock is a deep disconnect between expectations and what the market will bear.
