

# How to control charging and discharging of solar container

<div class="df\_qntext">Why is solar battery charging important?

Mastering the art of solar battery charging is essential--not only does it protect your battery's efficiency and longevity, but it also ensures the overall health of your solar power system.

<div class="df\_qntext">How to display accumulated charging power from solar panel?

As shown on the right, display the value of discharging current for Loads. As shown on the right, display the accumulated charging power from solar panel (Total ampere hour), long press the button more than 5 seconds, The value will back to zero.

<div class="df\_qntext">What should I do if my solar battery is not charging?

Measure the voltage and current with a multimeter to ensure the battery is receiving power from the solar panels and that the charge controller is functioning properly. If your solar battery isn't charging, check to ensure that the solar panels are receiving sunlight and are not obstructed by debris or shading.

<div class="df\_qntext">How do you charge a solar battery?

The best way to charge a solar battery is by using a charge controller that matches the battery type. This ensures optimal charge rates and prevents overcharging or undercharging. Employing Maximum Power Point Tracking (MPPT) technology can enhance this process by optimizing the power extraction from the solar panels.

<div class="df\_qntext">What happens if you overcharge a solar battery?

Overcharging a solar battery can lead to excessive heat generation, causing internal components to degrade prematurely. This not only shortens the battery's lifespan but can also pose safety risks, such as potential fires or explosions. Conversely, allowing a battery to deep discharge, or drain too low, can cause irreversible damage to its cells.

<div class="df\_qntext">Why is my solar battery not charging?

If your solar battery isn't charging, check to ensure that the solar panels are receiving sunlight and are not obstructed by debris or shading. Inspect the wiring and connections between the solar panels, charge controller, and battery. Corrosion or loose connections can impede the flow of electricity.
