

# Hydraulic solar container starter motor

<div class="df\_qntext">How do Hydraulic starters work?

Hydraulic Starters operate on the principle of oil under pressure turning a fluid power motor to produce mechanical energy. The oil is stored under high pressure in hydro pneumatic piston accumulators and released to the hydraulic cranking motor through a directional control valve. Kocsis Hydraulic Starters.

<div class="df\_qntext">What are Hydraulic starters used for?

The Hydraulic Starters are mainly used to start diesel enginesgenerally emergency sets for marine,oil and gas,off-shore,etc. Very reliable as an emergency starting system,because it is a closed and independent circuit with few mechanisms.

<div class="df\_qntext">How many liters can a hydraulic starter start?

The E series Hydraulic Starter can start an engine up to 100 liters(6100 cu. in.). Hydraulic Starters operate on the principle of oil under pressure turning a fluid power motor to produce mechanical energy.

<div class="df\_qntext">How does a Kocsis hydraulic starter work?

Kocsis Hydraulic Starters operate on the principle of oil under pressure turning a fluid power motor to produce mechanical energy. The oil is stored under high pressure in hydropneumatic piston accumulators and released to the hydraulic cranking motor through a directional control valve which may be manually or electrically actuated.

<div class="df\_qntext">How does a starter motor work?

Before the hydraulic fluid enters the starter motor it passes through a soft engagement valve. This valve ensures a smooth engagement and pressure build-up of the starter motor pinion with the ring gear of the flywheel. The hydraulic fluid that went through the starter motor is returned to the hydraulic reservoir.

<div class="df\_qntext">What is a hydraulic start system?

This covers engines from 1 up to 100 litres and a start duration up to 90+seconds. Hatraco offers system designs according to the required specifications for marine,offshore,oil and gas,and mining. The hydraulic start system is developed to charge,store and release hydraulic fluid in hydro pneumatic accumulators at high pressure.
