<div class="df_qntext">Are hydrogen-based fuel cell vehicles a viable option?

However,despite the potential gains,hydrogen-based fuel cell vehicles still face many serious obstacles to widespread deployment and adoption. Most significantly,the capacity for the worldwide production of green hydrogen is still extremely limited.

<div class="df_qntext">Can a car run on hydrogen?

A car that runs on hydrogenneeds a fuel cell to run the electric engine and a hydrogen tank to feed the fuel cell. The fuel cell converts hydrogen into electricity. The advantage of cars that run on hydrogen or a hybrid car (combination of hydrogen and battery) is that they drive for a longer range compared with battery electric vehicles.

<div class="df_qntext">Can a hydrogen car be used as an energy source?

"When parked, a hydrogen car can feed electricity back to the grid and thus act as a buffer for fluctuating renewable energy sources such as wind and sun to provide a sustainable energy system. The car then becomes an energy supplier for a residential area or an office complex, for instance" explains Farahani.

<div class="df_qntext">Can a hydrogen car be a power plant?

She and other researchers at TU Delft are working on Professor Ad van Wijk's concept of the 'Car as a power plant' (CaPP). In this concept,hydrogen cars will act as power sources in a sustainable energy systemin which electricity from renewable energy sources such as wind and solar power is converted into hydrogen.

<div class="df_qntext">How will hydrogen fuel cells affect the transportation industry?

The use of hydrogen fuel cells will soon have a large effecton the transportation industry,and producing fuel cells in large numbers and selling them commercially will soon be cheaper. A reasonable assumption is that fuel cell-based vehicles,power plants,and energy producers will increase in prominence in the next few decades.

<div class="df_qntext">What are the different types of hydrogen fuel cells?

Hydrogen fuel cells are available in many types. For H fuel cell applications in container handling equipment, the most relevant variety is the proton exchange membrane fuel cell (PEMFC).

Hydrogen system became useful only in case of high ratio of excess power from renewables. A techno-economic optimization for an isolated grid with a high share of renewables ...
