

Ice solar container device

<div class="df_qntext">How termodizayn solar-powered container type cold storage works?

You can store your products 24/7 regardless of the grid power anywhere you like with Termodizayn solar-powered container type cold storages. With container type cold rooms operating with solar energy, you can easily solve cold storage problems and post-harvest loss problems in perishable foods such as fruits, vegetables, meat and meat products.

<div class="df_qntext">What are ice storage systems?

Ice Storage Systems. Ice Storage Technology for the Energy Transition The sp.ICE is a modular ice storage system with compact dimensions and very short charging times, making it a high-end product for use as a full-load storage system.

<div class="df_qntext">What is a SP Ice Ice storage system?

The sp.ICE is a modular ice storage system with compact dimensions and very short charging times, making it a high-end product for use as a full-load storage system. This makes the sp.ICE particularly economical to operate in applications that need to cover peak cooling loads during the day when electricity tariffs are high.

<div class="df_qntext">What is a solar powered cold room?

Solar powered cold rooms are an affordable storage solution for any agriculture goods, such as fish, vegetables, beverages and dairy products. The compact design allows for low shipping costs; 6 kits can be shipped in a 40ft container. The equipment is easy to handle. All parts can be assembled by hand, and no crane or heavy truck are required.

<div class="df_qntext">How can SP ice store energy?

In cooperation with Stadtwerke Heidelberg, sp.ICE has developed an energy storage system that can centrally store more than 13 megawatts of cooling energy and deliver it to neighboring buildings via a district cooling network. Read about the project sp.ICE Blog

<div class="df_qntext">How does SP ice freeze water?

At the heart of the sp.ICE is a new development: modularly combined capillary tube mats create a large heat transfer surface. This enables the sp.ICE to freeze water at an average production temperature of $-2.5\text{ }^\circ\text{C}$. The energy stored in this way can be called up precisely at times of peak demand.
