<div class="df_qntext">What is liquid air energy storage?

Liquid air energy storage is an innovative and sustainable technology for storing energy surpluses from green energy sources. The big advantage of LAES is that you only use inexhaustible raw materials for energy storage. This is done in three steps:

<div class="df_qntext">What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest Panels lays flat on the ground.

<div class="df_qntext">What is a mobile photovoltaic system?

That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar energy while at the same time being compact in design, easy to transport and quick to set up. This system is realized through the unique combination of innovative and advanced container technology.

<div class="df_qntext">How do you convert energy surplus to liquid air?

This is done in three steps: Transform: you use the energy surplus to suck in air from the environment, which is cooled and converted into liquid air (cryogenic). Storage: the liquid air can be collected for the long term under low pressure in a vacuum-insulated tank.

<div class="df_qntext">How many households can a solar Container Supply?

Based on an average power consumption of a 4-person household of 4000 kWh per year and a location in Southern Germany, the solar container can supply approx. 32 households with climate-friendly electricity. At a location in Southern Europe it can even be up to 50 households due to the high solar radiation.

<div class="df_qntext">Can you use liquid air to generate electricity?

The liquid air is then pumped out of the tank again under high pressure. You can use this directly as compressed air, but you can also reuse it to generate electricity. Are you struggling with a heat surplus? Then you even enjoy an extra high efficiency for your energy storage.
