<div class="df_qntext">Could agricultural reservoirs be connected to micro-pumped hydro energy storage systems?

The study, published today in Applied Energy, finds agricultural reservoirs, like those used for solar-power irrigation, could be connected to form micro-pumped hydro energy storage systems - household-size versions of the Snowy Hydro hydroelectric dam project.

<div class="df_qntext">What is pumped hydro storage?

Pumped hydro storage is a clean and sustainable energy storage solution with minimal environmental impact compared to other forms of energy storage. By enabling greater use of renewable energy sources and reducing reliance on fossil fuels, PHS systems help decrease greenhouse gas emissions and promote environmental sustainability.

<div class="df_qntext">Can agricultural water reservoirs be used as hydro energy storage sites?

New research is exploring the potential for agricultural water reservoirs to be utilised as hydro energy storage sites.

<div class="df_qntext">How does pumped hydro storage impact the energy sector?

Pumped hydro storage has a significant impact on the energy sector by providing a reliable and efficient means of large-scale energy storage. This technology supports grid stability, enhances the integration of renewable energy sources, and offers economic and environmental benefits.

<div class="df_qntext">How do micro-pumped hydro energy storage systems work?

Micro-pumped hydro energy storage systems store excess solar energy from high-production periods by pumping water to a high-lying reservoir, which is released back to a low-lying reservoir when more power is needed. Image: Supplied.

<div class="df_qntext">Can small-scale pumped hydro energy storage systems revolutionise rural areas?

The research, published in Applied Energy, explores the idea of creating tens of thousands of small-scale pumped hydro energy storage systems by connecting these reservoirs, potentially revolutionising the energy landscape in rural areas.

The Los Angeles Department of Water and Power (LADWP) is investigating a project that would use Hoover Dam as part of a \$3 billion pumped hydro storage project. The plan calls for ...
