Penstock is used to connect the two reservoirs. The key components of a pumped storage power station are the hydro turbine and pump, which usually adopt the form of bladed hydraulic machinery. The mechanical energy of the water and the mechanical energy of the runner can be converted to each other.

<div class="df_qntext">What is pumped-storage hydroelectricity?

Pumped-storage hydroelectricity (PSH),or pumped hydroelectric energy storage (PHES),is a type of hydroelectric energy storage used by electric power systems for load balancing. A PSH system stores energy in the form of gravitational potential energy of water,pumped from a lower elevation reservoir to a higher elevation.

<div class="df_qntext">How does a pump turbine work?

During low energy demand,during off-peak hours,the pump turbine moves water from the lower reservoir to the upper reservoir,storing potential energy. When electricity demand is high,the stored water is released during peak hours and flows back down to the lower reservoir,turning the pump turbine and generate the electricity.

<div class="df_qntext">How does a pumped storage plant generate electricity?

Pumped storage plants convert potential energy to electrical energy,or,electrical energy to potential energy. They achieve this by allowing water to flow from a high elevation to a lower elevation,or,by pumping water from a low elevation to a higher elevation. When water flows to a lower elevation,the power plant generates electricity.

OverviewPotential technologiesBasic principleTypesEconomic efficiencyLocation requirementsEnvironmental impactHistoryPumped storage plants can operate with seawater, although there are additional challenges compared to using fresh water, such as saltwater corrosion and barnacle growth. Inaugurated in 1966, the 240 MW Rance tidal power station in France can partially work as a pumped-storage station. When high tides occur at off-peak hours, the turbines can be used to pump more seawater into the reservoir than the high tide would have naturally brought in. It is the only large-scale power plant of its kind.
