

Solar container inverter eps mode

<div class="df_qntext">What is EPs mode?

With the EPS Mode the inverter can provide energy to the loads without public grid connection or during grid outages. The EPS mode is only available when a battery is connected to the inverter. If PV generation equals the load consumption ($P < 100 \text{ W}$), the inverter won't charge or discharge the battery.

<div class="df_qntext">How much power does an EPS Inverter Supply?

You'll also need to be careful about what you turn on when in EPS mode. The EPS can supply up to 5kw of power (approx. 20A in the UK). If you draw more than this (say you have the oven on and then switch on the kettle and microwave), the inverter will overload and shut down requiring it to be reset in order to continue working again.

<div class="df_qntext">How do I use an EPS inverter?

Install a single/double socket close to the inverter that is fed by the EPS output (via a consumer unit). The socket will be powered via the inverter, during normal operation and in the event of a power failure will automatically switch to EPS mode, so long as the battery has capacity. The end user can plug in devices of their choice.

<div class="df_qntext">Do hybrid solar inverters provide EPs?

The next generation of Hybrid solar inverters are designed to provide EPS, as a way to provide customers with peace of mind during power failure. MYTH BUSTER: A Solar panel and battery system will not automatically provide backup storage in the case of a power cut, despite EPS functionality being listed on the datasheet.

<div class="df_qntext">How do EPS terminals work?

The EPS terminals are powered from the grid supply whenever it is available. When the inverter detects a grid outage it will automatically switch to take power from the batteries and solar (if available, on Hybrid inverters only). An overload of the EPS circuit may damage the inverter.

<div class="df_qntext">What happens if you overload an EPS inverter?

Multiple backup overloads may cause permanent damage to the inverter. Care should be taken to ensure that the EPS installation meets wiring regulations set out in BS7671 and the IET Electrical Energy Storage Systems (2nd Edition). The inverter creates a Neutral-Earth bond internally upon loss of grid, this means an external relay is not required.
