

In today's dynamic energy landscape, harnessing sustainable power sources has become more critical than ever. Among the innovative solutions paving the way forward, solar energy ...

In this paper, four novel evaluation indices and corresponding hierarchical optimization strategies are proposed for a deployable solar array system considering panel flexibility and joint ...

However, torsion springs, which work as the drive mechanisms, have hardly attracted people's attention. In this study, the influence of the parameters of torsion springs on the deployment behavior of a solar ...

Iijima et al.(2009) investigated torsion springing experimentally, they used a backbone with partial cut-outs to model elastic characteristics of torsion. Miyake et al.(2009) conducted model tests on ...

The main products are spring contact finger series, spring-in-spring structure series, torsion spring structure series, slotted jack, crown spring structure series and various customized ...

/Abstract : For solar array deployment, most existing studies mainly focus on modeling method of deployment dynamics, characteristics of hinges, and synchronization mechanisms. ...

In view of the above aspects, the simplification of the contact-impact problem in the process of solar array deployment is unreasonable. In this work, the deployment process of a torsion ...

IIS also produces spring from Exotic material like Inconel X-750, Inconel 718, Nimonic 90, Monel, Nimonic, Hastelloy, Beryllium copper etc. Spring design - IIS can design torsion springs for you ...

The experimental results indicate that the deployment performances are very sensitive to the parameter values of the torsion spring. Suitable torsion springs are highly needed to improve the deployment ...

Suitable torsion springs are highly needed to improve the deployment dynamics of solar array system. Therefore, a multi-objective optimization method for the design of torsion springs is...

Torsion springs are commonly used as drive devices in spacecraft solar array systems. In this study, a multibody dynamic model of a spatial bidirectional solar array with multiple clearance ...

In this paper, four novel evaluation indices and corresponding hierarchical optimization strategies are proposed for a deployable solar array system considering panel flexibility and joint clearance. The ...

A better storage dispatch approach could reduce production costs by 4 %-14 %. Energy storage technologies,

Solar container terminal torsion spring

including short-duration, long-duration, and seasonal storage, are seen as technologies ...

In this paper, four novel evaluation indices and corresponding hierarchical optimization strategies are proposed for a deployable solar array system considering panel flexibility and joint clearance.
