<div class="df_qntext">How much solar power can India have without a battery storage system?

Palchak et al. (2017) found that India could incorporate 160 GW of wind and solar (reaching an annual renewable penetration of 22% of system load) without additional storage resources. What are the key characteristics of battery storage systems?

<div class="df_qntext">Should you agree on an energy storage system contract?

Agreeing on a contract can be time-consuming and nerve-breaking. This report is not a reference legal paper but can give a few tips to look at when contractualization of an Energy Storage System contract.

<div class="df_qntext">How does a solar-plus-storage system work?

The solar-plus-storage system enables the utility to create a micro-grid, which provides power to a critical facility even when the rest of the grid is down. The utility operating the BESS also uses it to reduce two demand charges: an annual charge for the regional capacity market and a monthly charge for the use of transmission lines.
